Subject: Declaration on POP (Persistent Organic Pollutants)

Declaration POP (Persistent Organic Pollutants)

Persistent organic pollutants, also long-lived organic pollutants or POP (from Persistent Organic Pollutants), are organic compounds that are only very slowly degraded or converted in the environment (persistence). The term is typically applied to the "first generation" organochlorine insecticides (for example chlordane, DDT, dieldrin, toxaphene), some manufactured chemicals (PCB) and by-products of manufacturing and combustion processes (dioxins).

With this letter we would like to inform you that Käfer Messuhrenfabrik GmbH & Co. KG does not manufacture or use POP in its materials.

We have obtained relevant information from our suppliers and according to our current state of knowledge, no POPs are used by our suppliers.

Please understand that due to the rapidly increasing number of inquiries, we cannot fill out any special questionnaires. We hope, however, that this letter contains the information you have requested and we thank you for your trust and the good cooperation.

With best regards
REACH - Officer / Sifa
Falk Jauch
